Introduction

Project Overview

The Portfolio Website is a responsive and interactive web page showcasing personal details, skills, projects, and certifications of Shashikant Sahu. The website is designed to highlight technical expertise, professional experience, and contact information, making it ideal for job applications and networking.

Organized File Structure

Organized File Structure

The project follows a structured file organization for better maintainability and readability:

Description of Files:

- Portfolio.html: Contains the complete structure of the website, including sections like Home, About, Skills, Services, Projects, and Contact.
- Contains external resources like fonts and icons inside the .html file over the head tag.
- Portfolio.css: Contains all styling rules using Flexbox, Grid, animations, and responsive design techniques.
- images/: Stores images like profile picture, Photo, and certification logo.

Creativity and Presentation

Creativity and Presentation

The website is built with responsive design principles to ensure an appealing and engaging user experience:

Design Approach:

- Minimalistic & Clean UI: Uses a balanced color scheme, whitespace, and readable fonts.
- Responsive Design: Works seamlessly across devices using media queries and CSS Flexbox/Grid.
- Smooth Animations: CSS animations for hover effects, transitions, and interactive elements.

Key UI Elements:

- Navigation Bar: Fixed at the top, making it easy to access different sections.
- Home Section: Introduces the portfolio owner with a brief self-introduction and social media links.
- About Section: Provides an in-depth look into education, skills, and professional experience.
- Skills Section: Displays both technical and professional skills with interactive progress bars.
- Certifications Section: Showcases completed courses with links to view certificates.
- Projects Section: Displays latest projects with images, descriptions, and external links.
- Contact Section: A simple contact form to enable communication.
- Footer: Contains quick contact information like email and WhatsApp number.

1. Technologies Used

Technology	Purpose
HTML5	Structure and layout
CSS3	Styling, animations, responsive design
FontAwesome	Icons for UI elements

      <h3>MERN Full Stack Developer</h3>
      <p>
        I am a passionate software developer with a strong background in
        JavaScript, React, Node.js, and MongoDB. I recently post graduated
        from Dr. Shyama Prasad Mukherjee University of Ranchi with a degree in
        Master of Computer Application. I have worked on a projects during my
        six month internship at HashedBit Innovation, including web
        development. As part of my internship, I collaborated with cross-functional teams, which enhanced my teamwork
        and communication skills. I was responsible for developing interactive UI components, optimizing performance,
```

and debugging issues to ensure smooth user experiences. Additionally, I learned how to handle authentication and

authorization using JWT and bcrypt.js for secure login systems I have worked extensively with the MERN stack and

have a solid understanding of React.js, Node.js,

Express.js, and MongoDB. Throughout my projects, I have integrated REST APIs, implemented authentication, and

designed responsive UIs to ensure seamless functionality.

      <h2>HTML/CSS</h2>
      <p>
        HTML and CSS are scripting languages used to create a web page and
        web applications. HTML provides web page structure, whereas CSS is
        mainly used to control web page styling. This article will discuss
        the significant differences between HTML and CSS. The id selector
        uses the id attribute of an HTML element to select a specific
        element. The id of an element is unique within a page, so the id
        selector is used to select one unique element!

HTML/CSS
HTML and CSS are scripting languages used to create a web page and web applications. HTML provides web page structure, whereas CSS is mainly used to control web page styling. This article will discuss the significant differences between HTML and CSS. The id selector uses the id attribute of an HTML element to select a specific element. The id of an element is unique within a page, so the id selector is used to select one unique element!
HTML and CSS from basic to advance done from Udemy.

SQL
SQL stands for Structured Query Language. It is a standardized programming language used to manage and manipulate relational databases. It enables users to perform a variety of tasks such as querying data, creating and modifying database structures, and managing access permissions. SQL is widely used across various relational database management systems such as MySQL, PostgreSQL, Oracle, and SQL Server.
SQL Masterclass: SQL for Data Analytics done from Udemy.
